

Kriti Project - Core Understanding

What Is Kriti?

Kriti is a person, not a website or an AI.

From the documents:

- Kriti owns the blog production process.
- MAAI is the agency/team.
- Hermes is the AI agent platform being evaluated.

Relationship:

```
Kriti
  ↓
MAAI Content Process
  ↓
Potentially Automated By
Hermes
```

What Problem Are We Actually Solving?

At first glance it looks like:

"Build a blog website."

But that's not the real problem.

The real problem is:

"How do we make sure every blog follows the required quality standards before publishing?"

Today a human reviewer checks everything manually.

```
Writer
  ↓
Human Review
  ↓
Fixes
```

↓
Publish

This process is slow and repetitive.

What Is An SOP?

SOP = Standard Operating Procedure

Think:

Recipe
Checklist
Instructions
Process

Example:

1. Write blog
2. Check SEO
3. Verify facts
4. Add images
5. Add CTA
6. Publish

Kriti's document is basically a giant publishing checklist.

Important Terms

TLDR

"Too Long; Didn't Read"

Short summary at the top of the article.

Example:

TLDR:

AI can automate blog reviews.
Humans should still approve publishing.

CTA

Call To Action

What the reader should do next.

Examples:

Book a Demo
Start Free Trial
Contact Sales
Schedule Consultation

SEO

Search Engine Optimization

Making content rank higher on Google.

Keyword

What users search for.

Examples:

best CRM software
expense tracking software
AI blog writer

Internal Link

Linking to another page on the same website.

Example:

Read our CRM comparison guide

Funnel

Customer journey:

Visitor
↓
Interested
↓
Considering
↓
Customer

What Product Should We Build?

NOT This

Do NOT build:

- Another WordPress
- Another blogging platform
- Another CMS
- Another website builder

There are already thousands of those.

Build This

AI Blog Reviewer

Think:

Grammarly
+
SEO Checker

+
Content QA

How It Works

User Uploads Blog

Paste article

AI Reviews Content

Checks:

- TLDR exists
 - CTA exists
 - Keyword placement
 - Internal links
 - SEO structure
 - Sources
 - Images
 - Readability
-

AI Generates Report

Example:

Score: 82/100

✗ Missing CTA

✗ No Internal Links

△ Weak H2 Headings

✓ Good Keyword Usage

✓ Good Readability

Advanced Version

Instead of only finding problems:

✗ Missing CTA

The AI suggests one:

Ready to improve your sales process?

Book a free demo today.

Instead of:

✗ Missing TLDR

The AI writes one.

Instead of:

✗ Missing Internal Links

The AI suggests links.

Why This Is Valuable

Current Process:

```
Writer
↓
Human Reviewer
↓
Find Problems
↓
Writer Fixes
```

AI Process:

```
graph TD;
  Writer --> AI_Review[AI Review];
  AI_Review --> Problems_Fixes[Problems + Fixes];
  Problems_Fixes --> Human_Approval[Human Approval];
```

This saves time and standardizes quality.

What AI Should We Use?

MVP Recommendation

AI Model

Choose one:

- GPT-5.5
- Claude Sonnet

Claude is probably slightly better for reviewing long documents.

Tech Stack

Frontend:

```
Next.js
```

Backend:

```
FastAPI
```

Database:

```
PostgreSQL
```

AI:

GPT-5.5 or Claude

MVP Features

Version 1:

Paste Blog
↓
AI Review
↓
Score
↓
Suggestions

That's it.

No agents.

No workflow engine.

No Hermes.

Just prove users want the product.

Long-Term Vision

Version 2:

One-Click Fixes

Version 3:

Google Docs Integration

Version 4:

Agency Dashboard

Track:

- Blogs reviewed
- Pass rate
- Common issues
- Team performance

Final Conclusion

The opportunity is NOT:

Build a blog website.

The opportunity IS:

Build an AI-powered blog quality assurance platform that reviews content against a publishing SOP before it goes live.

Simple version:

```
graph TD; A[Upload Blog] --> B[AI Finds Problems]; B --> C[AI Suggests Fixes]; C --> D[Human Approves]; D --> E[Publish];
```

This is the clearest, smallest, and most valuable version of the idea.
